Participant j
Participant i
Participant k
declares estimate and confidence once at t_0
$[\alpha/\beta]_j,\ \theta_j$
$[\alpha/\beta]_i,\ \theta_i$
$[\alpha/\beta]_k,\ \theta_k$
personal trading robot i
$\dot{X}_i^\alpha = w(\theta_i)\, f\left(\frac{[\alpha/\beta]_\Omega}{[\alpha/\beta]_i}\right)\dot{R}$
$\dot{X}_i^\beta = w(\theta_i)\, f\left(\frac{[\beta/\alpha]_\Omega}{[\beta/\alpha]_i}\right)\dot{R}\,[\beta/\alpha]_i$
buy low, sell high, every instant
robot j
robot k
$\dot{X}_i^\alpha$
$\dot{X}_i^\beta$
$[\alpha/\beta]_\Omega$
Market: every participant's robot at once
$\sum_i \dot{X}_i^\alpha = \sum_i \dot{X}_i^\beta = 0 \implies [\alpha/\beta]_\Omega$
