

Participant j

Participant i

Participant k

declares estimate and confidence once at t_0

$[\alpha/\beta]_j, \theta_j$

$[\alpha/\beta]_i, \theta_i$

$[\alpha/\beta]_k, \theta_k$

personal trading robot i

$$\dot{X}_i^\alpha = w(\theta_i) f\left(\frac{[\alpha/\beta]_\Omega}{[\alpha/\beta]_i}\right) \dot{R}$$

$$\dot{X}_i^\beta = w(\theta_i) f\left(\frac{[\beta/\alpha]_\Omega}{[\beta/\alpha]_i}\right) \dot{R} [\beta/\alpha]_i$$

buy low, sell high, every instant

robot j

robot k

$\dot{X}_i^\alpha$

$\dot{X}_i^\beta$

$[\alpha/\beta]_\Omega$

Market: every participant's robot at once

$$\sum_i \dot{X}_i^\alpha = \sum_i \dot{X}_i^\beta = 0 \implies [\alpha/\beta]_\Omega$$
